

Create the difference

The right TPE-Compound for your applications

KRAIBURG TPE - Your reliable partner

At KRAIBURG TPE, our focus is on people:

Customers & Employees

Enthusiastic customers and highly motivated qualified quality workers are the basis of our success. We also work in close partnerships with our suppliers.

With our excellent know-how, we produce the best thermoplastic elastomer for you.

Specialization and extensive know-how

We offer you our know-how and experience as a renowned specialist supplier for best in-class elastic TPE compounds of consistent high quality.

As a customer of KRAIBURG TPE, you can choose from a broad portfolio of elastic TPEs that meet the needs of the market and facilitate customised products. Our product range is complemented by a comprehensive service and support package in which we assist customers all over the world with the processing of our products.

Our experience is your advantage

- Competent customer support by expert teams
- Focused product range
- Creative solutions for problems

Custom-engineering and innovation

With us, you have competence and innovation in the field of material solutions by your side.

Besides specific knowledge of the market, our strength is the use of technical expertise and our many years of experience in the production and processing of TPE compounds. We successfully fulfill individual customer requirements using our market-oriented portfolio of series-produced products or through the individual development of tailor-made, customer-specific compounds.

We use innovation to develop new ideas and unique solutions especially for you. Continuous expansion of our expertise through our excellently trained team of experts guarantees that you will receive the best possible service and advice.

Close cooperation with customers

KRAIBURG TPE focuses on the practical application of its products and maintains close ties to its customers.

We can thus respond quickly and in a flexible manner to all queries and are committed to successful working relationships with satisfied customers.

Global customer management with offices around the globe

Thanks to strategically chosen locations of production and branch offices in Europe, North-America and the Asia Pacific region, we can not only offer you fast and efficient support but are also familiar with the markets and needs of customers in the various regions.

Global service network

All around the world, we offer our globally active customers an efficient, personal support, logistics, and communication network, standardized service with consistently high product quality and standards, as well as rapid mold proving and decision making.

Production sites on three continents

Our production sites in Germany, Malaysia, and the USA guarantee an optimal supply of our products and services worldwide.

Waldkraiburg, Germany

Kuala Lumpur, Malaysia

Atlanta (GA), USA

Our Product: TPE

Our thermoplastic elastomers (TPE) are used all over the world in products that inspire people. TPEs are elastic like rubber (elastomers) and processible like plastics (thermoplastics).

TPEs combine the performance of plastics for the processor with the positive properties of elastomers for product developers and designers.

THERMOLAST®

The unique versatility of the THERMOLAST® compound range is the result of our extensive experience and dedicated development work in customer-specific and application-focussed projects.

THERMOLAST® includes five product groups available under the following trade names:

THERMOLAST® A

based on butyl acrylate rubber, with ideal properties for exterior automotive applications

THERMOLAST® K

based on thermoplastic styrene block copolymers (SBC) for use in the automotive, industrial and commercial sectors

THERMOLAST® M

special material group conforming to the stringent requirements of the medical equipment market, sold in combination with a unique specialised service pack

THERMOLAST® V

based on crosslinked styrene block copolymers;
for high-temperature applications in the automotive and industrial production sectors

HIPEX®

HIPEX® opens up a whole new range of applications to thermoplastic processors, without the need for any adjustments to the working method. Like a thermoplastic, this material can be processed on injection molding systems.

HIPEX® is distinguished by its high-temperature resistance (up to a maximum of 150 °C) and chemical resistance to engine and gearbox oil, as well as grease. The high-performance TPE has a wide variety of uses, ranging from sealing applications in vehicle engines, coverings to connecting and fastening elements.

COPEC®

Our COPEC® compounds combine a pleasant feel with chemical resistance. They offer a silky, velvety surface and are resistant to skin lipids, sun cream, and olive oil. COPEC® is also distinguished by outstanding adhesion to ABS and PC, and its good mechanical properties ensure high quality of the end product.

For Tec E®

For Tec E® also offers good resistance to skin lipids, sun cream, olive oil and various cleaning agents. Exceptionally good adhesive properties to many partly aromatic polyamides, polyarylamides, and polyamides such as PA 12, PA 6, and PA 6.6 make For Tec E® the perfect material solution for 2-component seals.

A wide range of applications

Thermoplastic elastomers from KRAIBURG TPE are not only suitable for all processing procedures of conventional plastics, they also offer great freedom with respect to form and color, depending on the application. Other impressive features are their resistance to a wide range of media, good adhesion properties to many components and optimal sealing, insulating, and anti-slip properties.

Our TPE compounds add value to your end products and their uses.

Best technology for best quality

Our success is based on the high quality of our TPE compounds. To achieve this, we are constantly expanding our market experience, employ highly qualified and dedicated workers and invest in the latest production technology.

As our compounds are analyzed in detail and tested against your requirements, they guarantee that your products are of a consistent high quality.

KRAIBURG TPE follows the principle of
"Getting better every day!"

We therefore operate an effective and continuous quality management system based on the latest standards. We are certified to ISO 50001 at our headquarters in Germany and holding ISO 9001 and ISO 14001 certifications at all global sites.

Environment and social responsibility

KRAIBURG TPE promotes sustainability in all its corporate decisions by taking into account economical as well as ecological and social concerns. The concept of sustainability is a factor in all our corporate decisions and is also passed on to our business partners. We take our responsibility towards society and future generations seriously and act accordingly.

Our key targets are the reduction of environmental impacts, the sustainable use of resources and energy-efficient production processes, by which the international environmental and energy standard ISO 14001 serves as a point of reference. We appreciate the value of our employees and see them as cornerstones of our economic success.

We are currently working in a number of areas to improve our performance:

- Use of renewable commodities
- Use of white oils in our processes
- No use of PVC and latex
- Production of halogen-free materials
- Production of 100 % recyclable materials
- Worldwide certified according to ISO 14001
- Systematic energy management
- Environmental and occupational safety program
- Selection of raw material suppliers by assessing their quality and environmental impact
